

Scandinavian entomologists 7—Andreas Strand

ASTRID LØKEN

Ent. scand.

Løken, A.: Scandinavian entomologists 7—Andreas Strand.
Ent. scand. 11: 343–347. Lund, Sweden 15 September 1980. ISSN 0013-8711.

A short biography of Andreas Strand (1895–1980) is given together with a complete bibliography of his entomological papers. He described 49 new species 42 of which are still valid. A list of the species and the synonymy is presented.

A. Løken, Zool. Inst., Univ. of Oslo, P.O. Box 1050, Blindern, Oslo 3, Norway.

Andreas Strand (1895–1980) was born in Haugesund on the south-west coast of Norway. He moved to Oslo in 1917 where he worked as a civil servant with the Telecommunication Board. He attained the position of office manager and in this capacity was responsible for foreign affairs related to telegraphy. His duties included telecommunications of conferences in Europe, USSR, Japan, India and USA. In spite of his occupational responsibilities he was nonetheless known as an entomologist of international caliber.

Andreas Strand's ever absorbing interest in natural history began when he collected beetles as a schoolboy. After settling in Oslo he became acquainted with entomologists and particularly with Thomas Münster who stimulated his interest in the beetles. He became a member of the Norwegian Entomological Society in 1920 and for the remainder of his life he devoted all his spare time to Coleoptera, gradually becoming an authority of this order.

It almost seems to be a rule that amateurs fascinated by beetles begin by collecting carabids and Andreas Strand was no exception. He collected, exchanged and bought specimens and in the course of a few years he had a representative collection of Carabidae. Gradually, however, he became more interested in the taxonomy and the fauna of Norwegian Coleoptera and became familiar with the taxonomy of the Norwegian families.

Andreas Strand had a sharp eye for taxonomical details and individual variations and made

extensive contributions to the systematics of critical taxa by detailed work at specific and generic level combined with revisional studies. His interest in general natural history is reflected in the ability to place details into a wider systematic and zoogeographical perspective. The most significant work is perhaps "Nord-Norges Coleoptera" based on field trips in Northern Norway during many summer vacations and on revisional studies of museum collections. It is a fundamental faunistic and zoogeographical work and presents moreover basic information about the habitat and the niche of each of the species involved. In addition, it is a taxonomical work where he to some extent evaluates specific variations, subspecies, etc. and elucidates systematic relations between close and critical species.

Andreas Strand used almost all his spare time to study the Norwegian fauna. As a result of his labor he added many species to the Norwegian list of Coleoptera, several of which were new to science. In 1977 he donated his entomological collections and his entomological library to the Zoological Museum, University of Bergen. The "Nordic" collection encompasses more than 80000 specimens consisting of 4609 species and lacks but a few Norwegian species. The "Palae-arctic" collection consisting of about 2570 species was just about considered to be a reference collection. All the types was previously donated Zoological Museum, University of Oslo.

Andreas Strand had an intensive correspondence with coleopterists throughout the world. He was cherished for his willingness to help col-

leagues, museum staff and young amateurs both within and outside the country. He had an amazing memory. Even after 1977 when he no longer had access to his entomological collections and literature, he managed to recall details in the taxonomy, distribution synonymy, etc. of the individual species in his collection. Moreover he fulfilled the Norwegian part of Enumeratio Coleopterorum Fennoscandiae et Daniae which appeared at the end of 1979.

In recognition of his contribution to Norwegian entomology Andreas Strand was created to doctor honoris causa at the University of Bergen in 1965 and was awarded The King's gold-medal of merit the same year. He was a corresponding member of Tromsø Museum and a honorary member or a corresponding member of numerous entomological societies.

Andreas Strand managed indeed to combine the enthusiasm of an amateur with the objectiveness of a scientist. This modest and friendly man has by his outstanding entomological contributions created a lasting monument.

Bibliography

Below are listed Strand's paper in entomology; for those published in Norwegian a translation of the title is given where necessary.

 1943a *Myllaena hyperborea* A. Strand, 1943: 206
 1943b *Atheta hansseni* A. Strand, 1943: 225
 1943d *Hydnobius hyperboreus* A. Strand, 1943: 74
 1943d *Hydnobius claviger* A. Strand, 1943: 76
 1946a *Clambus borealis* A. Strand, 1946: 168
 =*Clambus punctulum* (Beck, 1817)
 1946a *Ptilium nanum* A. Strand, 1946: 170
 =*Oligella nana* (A. Strand)
 1946a *Acrotrichis nana* A. Strand, 1946: 170
 =*Acrotrichis dispar* (Matthews, 1865)
 1946a *Oxytelus clavatus* A. Strand, 1946: 171
 =*Anotylus clavatus* (A. Strand)
 1946a *Philontus astutoides* A. Strand, 1946: 171
 =*Gabrius astutoides* (A. Strand)
 1946a *Oxypoda hansseni* A. Strand, 1946: 172
 1946a *Trypodendron piceus* A. Strand, 1946: 172
 1946b *Gyrophæna hanseni* A. Strand, 1946: 1973
 1950b *Mycetoporus hellieseni* A. Strand, 1950: 85
 =*Mycetoporus bauduerei*, Mulsant & Rey, 1875
 1958a *Enicmus pseudominutus* A. Strand, 1958: 184
 =*Latridius pseudominutus* (A. Strand)
 1958b *Atheta glabriloides* A. Strand, 1958: 187
 1958b *Atheta convergens* A. Strand, 1958: 187
 1960c *Pteryx splendens* A. Strand, 1960: 173
 1962b *Atheta debiloides* A. Strand, 1962: 27
 1962f *Chilopora crebrepunctata* A. Strand, 1962: 39
 =*Parocyusa crebrepunctata* (A. Strand)
 1965a *Cis hanseni* A. Strand, 1965: 61
 1968b *Corticarina irkutensis* A. Strand, 1968: 40
 1969c *Mycetoporus despectus* A. Strand, 1969: 56
 1971c *Atheta sundti* A. Strand, 1971: 138
- Species described by C. Johnson & A. Strand**
- 1968 *Atomaria lohsei* C. Johnson & A. Strand, 1968: 94
 1968 *Atomaria pseudaffinis* C. Johnson & A. Strand, 1968: 94

Manuscript received March 1980.
